### **DETAILED ACTION**

This office action is in response to applicant's election filed on November 10, 2006.

Applicant has elected the invention of group I (claims 1-8; 15-28; 33-47). Claims 9-14, and 29-32 have been canceled.

#### ***Claim Rejections - 35 USC § 112***

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 15-21 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

As per claim 15, line 5, "special handling" is considered as vague and indefinite.

#### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Art Unit: 2189

Claims 22 and 24 are rejected under 35 U.S.C. 102(b) as being anticipated by Rozman et al. (US Patent No. 5,438,614).

As per claim 22, Rozman teaches a processor (fig. 8B, element 633) having a transceiver coupled to dual antennas (fig. 2, element 105); and a memory module (fig. 9A, element 921) coupled to the processor and including, a memory controller (fig. 9A, element 915), storage devices to form a mass storage that is coupled to the memory controller (fig. 9A, element 925), and a host controller coupled to the processor to provide a refresh cycle issued through an interface to the storage devices (fig. 9A, element 915; col. 16, lines 48-63; works as a host/memory controller).

As per claim 24, Rozman teaches the storage devices are flash memory devices (fig. 9A, element 925).

### ***Allowable Subject Matter***

Claims 1-8, and 33-47 are allowed.

Claims 23, 25-28 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

Art Unit: 2189

As per claim 1, the prior art of the record fails to teach a host control interface to couple the processor to the nonvolatile mass storage device and issue read/write commands to manage polarity.

As per claims 33, and 42, the prior art of the record fails to teach using a polarity map to determine how polarity is to be handled for a specific access to the mass storage.

As per claim 39, the prior art of the record fails to teach allowing a memory controller to detect an error and interrupt the software controlling the storage devices to report a memory refresh failure.
